Part A – Short Answer Questions

1. What is a web browser?

A web browser is a program that we use to open and view websites on the internet.

2. What is the main function of a browser?

The main function of a browser is to open websites and show their content properly on the screen.

3. What is Developer Tools in a browser?

Developer Tools is a tool inside the browser that helps us check website code, find errors, and test changes.

4. What is a code editor?

A code editor is a program where we write and edit our website or programming code.

5. What does HTML stand for?

Hypertext Markup Language

6. Is HTML a programming language? Explain briefly.

HTML is not a programming language because it does not perform logic. It is only used to design and arrange content on a webpage.

7. What is the purpose of the head tag?

The head tag contains metadata such as title, links to CSS files, and scripts

8. What is the purpose of the body tag?

Everything that appears on the screen of a website is written inside the body tag.

9. What is the function of the title tag?

The title tag defines the title shown in the browser tab

10. What is the difference between h1 and p tags?

<h1> is used for main headings, while <p> is used for paragraphs of text.

Part B – Long Questions

1. Explain the difference between a browser and a code editor.

A browser is used to open and view websites on the internet. A code editor is used to write and edit HTML, CSS, and JavaScript code. The browser shows the final output, while the code editor is used to create the website files.

2. Describe the complete structure of a basic HTML page.

A basic HTML page starts with the DOCTYPE declaration. The html tag is the root element. Inside it, there are two main sections: head and body. The head contains metadata and the title. The body contains visible webpage content.

3. Why is HTML called a markup language?

HTML is called a markup language because it uses tags to mark up content and define the structure of a webpage.

4. Why are headings important in a webpage?

Headings organize content, improve readability, and help search engines understand the structure of the webpage.

5. Explain the role of Developer Tools for web developers.

Developer Tools help developers inspect HTML elements, debug CSS and JavaScript, test responsiveness, and fix errors efficiently.

Part C – HTML Writing

Task 1: Personal Introduction Page

```
<!DOCTYPE html>
<html>
<head>
```

```
<title>My First Assignment</title>

</head>

<body>

<h1>About Me</h1>

<p>My name is Hasnain. I am learning web development and improving my skills

<p>I enjoy creating responsive and user-friendly websites.</p>

<h2>My Goals</h2>

<p>My goal is to become a professional full stack developer and work on inter

</body>

</html>
```

Task 2: Corrected HTML Code

```
<!DOCTYPE html>

<html>

<head>

<title>Student Page</title>

</head>

<body>

<h1>Welcome</h1>

<p>This is my profile page.</p>

</body>

</html>
```

Bonus Question:

Basic HTML Structure Explanation:
